Setup

Download TCGA GDC RNA-seq count files using a cart manifest, then preprocess into a merged count matrix.
Data: GDC Portal.

Running in R (copy-paste): Set working directory to project root first, e.g. `setwd("/path/to/Tutorial")`, then run the **paths** chunk (and **packages**), then the rest in order. Or run from `Script/` — paths will still resolve.

```
# Absolute paths from project root (same logic as setup -
# run setup first, or this defines project_root)
if (!exists("project_root")) {
    cur <- tryCatch(knitr::current_input(), error = function(e) NULL)
    path <- if (is.null(cur))
        NULL else if (is.character(cur))
        cur else cur[["path"]]
    if (!is.null(path) && length(path) > 0) {
        project_root <- normalizePath(file.path(dirname(path[1]),
            ".."), mustWork = FALSE)
    } else {
        wd <- getwd()
        project_root <- if (dir.exists(file.path(wd, "Data")))
            wd else normalizePath(file.path(wd, ".."), mustWork = FALSE)
    }
}
DATA_DIR <- file.path(project_root, "Data")
COUNTS_DIR <- file.path(DATA_DIR, "gdc_counts")
MANIFEST <- file.path(DATA_DIR, "gdc_manifest.2026-03-12.122540.txt")
```

```r

GENE_INFO_FILE <- file.path(paste0(DATA_DIR, "/Input"), "gene_info.rds")

1. Download GDC counts

Create the output directory and read the manifest.

```r
dir.create(COUNTS_DIR, showWarnings = FALSE, recursive = TRUE)
manifest <- read_tsv(MANIFEST, show_col_types = FALSE)
n_files <- nrow(manifest)
message("Manifest: ", n_files, " files → ", COUNTS_DIR)
```

```
## Manifest: 1224 files → /Users/xliu2942/Documents/Projects/Tutorial/Data/gdc_counts
```

Download each file by GDC file UUID (skips existing files with matching MD5).

```r
download_one <- function(file_id, filename, expected_md5 = NULL) {
    url <- paste(GDC_DATA_URL, file_id, sep = "/")
    dest <- file.path(COUNTS_DIR, filename)
    check_md5 <- !is.null(expected_md5) && !is.na(expected_md5)
```

```r
    if (file.exists(dest)) {
        if (check_md5) {
            actual <- as.character(tools::md5sum(dest))
            if (!is.na(actual) && identical(actual, as.character(expected_md5))) {
                message("[skip] ", filename, " (already exists, MD5 OK)")
                return(invisible(TRUE))

            message("[skip] ", filename, " (already exists)")
            return(invisible(TRUE))
        }
    }

    # one-line-per-page in PDF
    prog <- if (interactive() && !knitr::is_latex_output())
        progress() else list()
    resp <- GET(url, write_disk(dest, overwrite = TRUE), prog)
    if (http_error(resp)) {
        warning("Failed: ", filename, " - ", status_code(resp))
        if (file.exists(dest))
            try(file.remove(dest))
        return(invisible(FALSE))
    }

    if (check_md5) {
        actual <- as.character(tools::md5sum(dest))
        if (is.na(actual) || actual != as.character(expected_md5)) {

            return(invisible(FALSE))

Summary

Done. Count matrix: 60660 genes × 1224 samples.

Outputs in `Data/`:

- `count_matrix.rds` — raw counts (genes × samples)
- `gene_info.rds` — gene_id, gene_name, gene_type
- `samples.rds` — sample_id, file
